### **Scope:**

Community Tree Service has been hired to assist with debris removal. Fire damaged trees that pose an obvious, immediate risk to the County-maintained roadway system are to be removed. Removal includes hauling away debris unless there is slope with minimal fall that chipped material can be spread across without falling into the stormwater ditch line. Work must re-establish overhead clearance where the fire has caused downed limbs or branches to hang into the roadway system below minimum safety requirements. Contractor(s) will be teamed up with a County Road Supervisor directing work according to a road schedule and direction of assignments.
